

Yoto

Yoto is an innovative audio platform designed for children, offering a unique and interactive way for them to engage with stories, music, and learning content. The Yoto Player, a screen-free and kid-friendly device, allows children to independently control and explore a curated library of audio content through physical cards. These cards, featuring characters and images, are inserted into the Yoto Player, initiating the corresponding audio experience. Yoto aims to provide a safe, screen-free environment for kids to foster their imagination, creativity, and learning through audio adventures.

Yoto has joined the Design & Technology Association's Inspired by Industry initiative for KS3, shaping a D&T context that allows students to design educational toys. Aligned with Yoto's expertise in screen-free audio players, the context allows exploration of materials, prototyping with tools like Micro:bit or Crumble, and creating diverse outcomes.
